

ACADEMIC QUALIFICATIONS		
Degree	College/School	Year
BE (CSE)	Thapar Institute of Engineering and Technology,Patiala (8.33 GPA)	2024-Present
Diploma (CSE)	Thapar Polytechnic College,Patiala (78.64%)	2021-2024
Class X	Pathania Public School,Rohtak (87%)	2020-2021
KEY SKILLS AND SOFTWARE PROFICIENCIES		
Languages and Frameworks	CS Fundamentals	AI & Tools
Python, C, C++, HTML, CSS, JavaScript, MySQL, R, React.js, Node.js, Express.js, MongoDB, Java, Linux OS (Ubuntu), N8n.	Object-oriented programming(OOPs), Database Management System(DBMS), Artificial Intelligence, Data Structures and Algorithms, Operating system(OS), Test Automation.	Predictive Modelling, Machine Learning Algorithms, VS Code, Git, GitHub, Arduino UNO, Cursor, Selenium, Vercel, Render.
PROJECTS		
Typeify: (<i>React, Node.js, Express, MongoDB, Socket.io, JWT, Tailwind CSS, Selenium</i>) Developed a Monkeytype-style typing platform with solo tests and real-time multiplayer races. Built JWT auth, MongoDB score persistence, live WPM/accuracy tracking, and Socket.io room-based racing with synchronized prompts and leaderboards. Automated end-to-end UI flows with Selenium (login, typing tests, score save, and leaderboard) to validate core user journeys.		
Self tuned-Chatbot: (<i>Python, Scikit-learn, Pandas, NumPy, Matplotlib, React, Node.js</i>) A conversational chatbot built in Python that tunes its own responses — experimenting with self-improving dialogue: collecting interactions, refining the model, and iterating on response quality inside a reproducible Jupyter workflow.		
PCOS Detection from Ultrasound Images: (<i>Python, OpenCV, Scikit-learn, Scikit-image, Random Forest, NumPy, Matplotlib</i>) Developed an automated diagnostic tool to detect ovarian cysts in ultrasound images using a dataset of 1,900+ samples. Implemented advanced image preprocessing including CLAHE for contrast enhancement and contour detection for cyst localization. Engineered high-dimensional features using GLCM (Gray-Level Co-occurrence Matrix) for texture analysis and shape-based metrics to train a Random Forest classifier, facilitating more efficient clinical screenings.		
Leaf Disease Detection using Machine Learning: (<i>Python, Tensorflow, Matplotlib, Keras, Numpy</i>) Developed a deep learning-based image classification system to detect plant leaf diseases using CNN architectures including DenseNet121 and ResNet. Collected and preprocessed a dataset of healthy and diseased leaves, improving data quality for training. The model achieved 95% accuracy in identifying diseases such as blight, rust, and mildew. Implemented using Python with TensorFlow/Keras, OpenCV, NumPy, and Pandas.		
Internship Management Platform: Full-stack web application for end-to-end internship lifecycle management. Built with React 18 + TypeScript, Node.js/Express, and MongoDB. Features include role-based dashboards (student, company HR, mentor, admin), Kanban-style candidate pipeline with drag-and-drop, real-time SSE notifications, Redis-backed JWT auth with refresh token rotation, OTP email verification, file uploads via Cloudinary, certificate PDF generation on internship completion, ratings/reviews system, Google OAuth, mentorship matching with session notes and progress logs, and an admin audit trail. Deployed on Vercel + Render. Link is given below: https://internship-platform-eight.vercel.app/		
EXPERIENCE		
AI Software Developer Intern, Es Magico (Jul 2025 – Sep 2025): (<i>n8n, Workflow Automation, APIs, AI automation</i>) Built and maintained automated workflows using n8n to connect APIs, streamline internal processes, and support AI-powered features. Gained hands-on experience in no-code/low-code automation, debugging pipelines, and deploying production-ready integrations.		

Full Stack Developer Intern, Xebia (Jun 2026 – Present): *(MERN Stack, Cloud, DevOps, Database)* Developed a full-stack Internship Management system featuring secure user management and an AI-powered chatbot for query resolution. Built REST APIs, automated application workflows, and deployed scalable services on Azure. Gained hands-on experience in cloud deployment, debugging, and delivering production-ready full-stack features.

ACHIEVEMENTS

- Completed Summer Training at Thapar Polytechnic College (Jul 2023), building AI/ML projects with Python and strengthening practical skills in data preprocessing, model training, and evaluation.
- Completed Be10x Workshop on AI tools and ChatGPT, learning prompt engineering, rapid prototyping, and AI-assisted software development workflows.
- Achieved up to 95.2% training accuracy across ML projects by engineering features, tuning models, and iterating over 20+ epochs with consistent performance gains.
